

Project Sprint Retro Notes

Team: up-sep

Sprint: #2

Date: 11/10/21

Attended: All

Scrum Master: Timothy Tran

Product Owner: MD

Development team: Nandini Nair, Victoria Kokurin, Noel Matthews, Kyriecce Dam

1. Things That Went Well

We hit our straps in terms of development. Ticked off user stories and implemented some of the outstanding items. Our communication was good, and we had regular meetings to ensure we were all on track.

2. Things That Could Have Gone Better

We were slightly disorganised at the beginning of our Sprint, which led to the end being a bit crazy in terms of workload. Team members who were having difficulty with their implementation could have been more active in seeking out help or advice from other team members.

3. Things That Surprised Us

Docker and Circle CI were difficult to implement initially, but once you get the hang of it, it all comes together nicely.

4. Lessons Learned

If we are struggling with an outstanding item, it is always okay to ask for advice from the team as some members are more experienced than others in certain areas and are willing to share that.

5. Final Thoughts

We were pleased with the progress made during this Sprint and feel more capable with the tools being used. We will be more proactive in seeking out help should we need it in the next Sprint. Overall, great stuff.
